PROJECTS

- **Game Development - Sepak Takraw (Java Script, Unity).**

A first person game made available for Windows and Android platforms. It is a basic version that includes attractive design layout, audio, triggering and animation functionalities. The objective of the game is to make the player shoot (the ball) to the other end, while the opponent (computer) tries to do the same, within boundaries.

- **Predictive Analytics - Crime Analysis and Control (R, RStudio).**

A project that focuses on reducing the rate of crimes by predicting the criminal's activities, which are going to happen in future. Based on the records of criminals and their area of expertise, the type of crime is analyzed and preventive measures will be identified.

- **i-Shopping with Sensor Fusion and Customer Structurization (Python, Python IDLE).**

Our project provides solution to overcome the difficulties of both offline grocery shops and online groceries. The aim is to bridge the gap between these two realms of grocery shopping by allowing the people to purchase the required products and leave without spending time at checkout counters, which is achieved through sensor fusion. These measures also results in increasing profit for the stores as well.
